

Conservation Activity Plan

Comprehensive Air Quality Management

December 2011

Comprehensive Air Quality Management

A comprehensive air quality management conservation activity plan is a site-specific strategy to help a landowner improve air quality on or near agricultural operations.

NRCS Technical Service Providers (TSPs) prepare these plans using inputs such as assessments of:

- Particulate matter
- Ozone precursors
- Odors
- Greenhouse gases

Conservation practices recommended in such a plan can include:

- Land treatment
- Manure management systems
- Livestock feeding management
